

COMPANY PROFILE

| | |
|---|--|
| Company name : | Az. Agr. Ronca |
| Presentazione : | <p>The Ronca Family has been cultivating their own estate in Sommacampagna since 1976, a small town located in the marvelous hills between Garda Lake and historic Verona.</p> <p>20 hectares of vineyards, among which the native varieties supported by international vines stand out, all dedicated to organic farming, and a modern cellar built in 2006; all this, together with the collaboration of expert winemakers, allows the Ronca company a wide selection of wines and the highest expression of the terroir.</p> <p>Each wine produced has a wide aromatic complexity combined with the minerality typical of the morainic hills expressed at its maximum potential. In the company line we find the historic DOCs of the area, Custoza and Bardolino, flanked by monovarietal interpretations of native vines of the area such as Garganega IGT and Corvina IGT.</p> <p>We currently produce 40,000 bottles a year, with much higher potential, but our eye is on selection and quality.</p> <p>The winery appears to be a perfect combination of technology and respect for nature. From the beginning, the classic chemical weeding was abandoned in favor of a less impactful mechanical weeding. In 2013, organic experimentation began without the use of insecticides against the most harmful insect of the vine, the moth. Given the enormous success, chemical pesticides have been totally eliminated.</p> <p>At the same time, we worked to improve the performance in terms of polluting emissions. In 2012, a photovoltaic system was completed for the production of electricity. The sun's energy is also used for the production of hot water, which covers about 85% of the cellar's needs.</p> <p>At the end of all our efforts, in 2015 we embarked on the process of conversion to organic production and transformation, and in 2018 we bottled the first organic DOCs.</p> <p>Our production processes are always in continuous evolution based on the territorial climatic trend.</p> |
